Address	Indramayu, West Java - Indonesia	Nationality	Indonesian

PROFESSIONAL SUMMARY

Frontend Developer with 8+ years of proven experience shipping production-ready web products that are fast, accessible, and conversion-focused. Deep expertise in HTML, CSS/SCSS, Tailwind, and delivering high-impact no-code/low-code solutions via Webflow and WordPress/Elementor for rapid time-to-market.

My edge is bridging the gap between design and engineering: translating Figma concepts into pixel-perfect, maintainable code with a keen eye for detail. I'm currently expanding into modern JS frameworks — actively building projects with React, Next.js, and TypeScript to deepen component-based development skills.

Early adopter of AI-assisted development (vibe coding) — integrating tools like GitHub Copilot, Claude, and DeepSeek to multiply engineering velocity without sacrificing quality. Always learning, always shipping.

WORK EXPERIENCE

PT Software Seni Indonesia – Yogyakarta (Full Time)

Frontend Developer | April 2021 – July 2026

- Led the frontend architecture and development of Cybermatika, a core internal enterprise product aimed at optimizing company operations and internal workflows.
- Engineered pixel-perfect, highly responsive web platforms for high-end international real estate clients, including Kay and Burton, Magain, and 1st City, ensuring seamless cross-browser compatibility.
- Overhauled the frontend execution of Softwareseni's official ID and AU corporate websites, focusing on Core Web Vitals optimization, faster load times, and SEO-friendly markup.
- Utilized Tailwind CSS, SCSS, and modern layout techniques to build reusable UI components and streamline styling maintenance.
- Actively leveraged AI-assisted development tools (Github Copilot and Claude) to accelerate code production, optimize debugging, and maintain high engineering efficiency.
- Collaborated closely with Project Managers, UI/UX designers, and cross-functional teams to translate complex wireframes into high-performance web applications.

PT Digital Angkasa Indonesia (Codelabs) – Tangerang Selatan (Full Time)

Frontend Web Developer | October 2017 – March 2021

- Developed the frontend interface for StroTV, an online video streaming web platform.
- Built the frontend interface for Misteraladin Travels, specifically optimizing the user flow for domestic and international flight booking systems.
- Maintained, performed bug-fixing, and optimized features for the Mayflower with Mastercard Travels frontend website.
- Developed and maintained prominent travel and loyalty platforms, including KIA Tours and Travels, Instant OTA Travel, and Enreech Loyalty Program for City Tours.
- Developed Codelabs suite of internal products and marketplaces, including POS Marketplace, Sales Forces (technician management app), and internal utility apps for booking meeting rooms and vehicles.

PT Digital Angkasa Indonesia (Codelabs) – Tangerang Selatan (Internship)

Web Developer Internship | Aug 2016 – Nov 2016

- Developed responsive frontend interfaces for Sewain and StroTV platforms.
- Built the backend systems and implemented robust RESTful APIs for the YBM-BRI website.

TECHNICAL SKILLS

Frontend Core: HTML, CSS, SASS/SCSS, Tailwind CSS, Bootstrap CSS

Platform and CMS: WordPress, Elementor and Webflow

Tools and Ecosystems: Git Version Control, NPM, AI – Assisted Dev (Github copilot, Claude and Deepseek)

Tech Exploration: React, Next.js and Typescript

EDUCATION

Politeknik Negeri Indramayu (Polindra)

Associate Degree (D3) in Informatics Engineering | GPA: 3.71 (2014 – 2017)

Activities: Website Development Club — built and maintained web projects as part of student-led development initiatives

Notable Project: Futsal field rental booking website (PHP, MySQL, HTML, CSS, JS)

LANGUAGE

Indonesian – Native and English - Intermediate
